

SWANS

SEE THE DIFFERENCE

Naga Kusumi and New York State Ski Racing team up to honor the Trophy Series race winners. The first place girl and boy in each of the Jr. I & Jr. II age classes will be awarded a pair of Swans goggles at Trophy Series races.

Try these innovative goggles and you'll see the difference! www.swansusa.com

Swans a world leader in polarized optics continues to push the envelope in winter goggle innovation.

As the worlds first polarized goggle manufacturer, Swans continues to develop features not found in any other goggle line. Swans patented polarized film insertion technology surpasses traditional vapor deposition coatings used by all other polarized goggle manufacturers. This patented process seamlessly bonds polarized film in-between two super thin layers of impact resistant polycarbonate. The Swans PDH polarized lens block 99.9% of UV plus harmful blue and yellow rays giving the wearer enhanced contrast in all light and weather conditions. This prevents the need of changing lenses as required when using traditional coated lenses. The Swans brand strives for innovation beyond lens design and helmet compatibility with the Talon outrigger system, the patent pending Claritex™ anti-scratch water repelling coating, Claritex Mesh™ water repelling vent material, Guard Mirror™ Scratch proof mirror coating and patent pending BLE™ removable, washable, replaceable face liner found on the award winning Rising Sun line. All Swans goggles come with flexible double anti fog lenses, super soft Puff Form™ contoured face liner for that perfect fit and UV cut. Swans also offers a line of polarized "Over the Glass" goggles, the TBR fan goggle and polarized goggles for children. Swans are a supplier to the **US Ski and Freestyle Team**.
